

Response to Technical Check Results

Manuscript Ref.: PRLETTERS-D-26-01858

Title: When Is a Scale Redundant? Data-Dependent Scale Redundancy and Zero-Training Pruning for Real-Time Object Detection

Journal: Pattern Recognition Letters (Elsevier)

Dear Editor,

We thank the journal office for the initial technical check. We have carefully addressed every comment below and resubmit the revised manuscript (main_prletter.pdf, 6 pages, double-column, typeset with the Journal's official Pattern Recognition Letters template).

Comment 1 — Authorship Confirmation form

Comment: The Authorship Confirmation form should be provided in the Journal required format and should be uploaded under the item type 'Cover Letter' in the 'Attach Files' section. The mandatory form can be accessed at the provided link.

Response: We have downloaded, carefully read, and completed the mandatory *Pattern Recognition Letters Authorship Confirmation* form following the Journal-required format. The completed form (patrec-authorship-formatting-FILLED.pdf) is uploaded under the item type "Cover Letter" in the 'Attach Files' section.

Comment 2 — Double-column manuscript format

Comment: The manuscript should be present in double column format and should follow the submission template format provided in the Guide for Authors.

Response: We have reformatted the complete manuscript using the Journal's official Pattern Recognition Letters template (elsarticle.cls with prletters.sty, two-column final layout, author-year references), exactly as specified in the Guide for Authors and in the Journal's Authorship & Formatting form. The revised manuscript (main_prletter.pdf) is therefore in double-column format, follows the submission template, and is 6 pages, within the Journal's maximum allowed length (7 pages). In addition, the revised version now includes the complete spatial-budget curves, a model-size/architecture robustness analysis, measured block-skipping throughput, and an expanded discussion, further substantiating the reported results.

We trust that the revised manuscript now meets the Journal's formal criteria and look forward to your further consideration.

Sincerely,

Yuanchao Yan (Corresponding author)
